DOCUMENT SOLUTIONS

Dear Customer,

Thank you for trying the online demo of StampPDF Batch by Appligent.

StampPDFBatch is a high-volume server-side document stamping application used to apply text, images, barcodes or other PDF pages directly onto your PDF documents. With multiple features and customization options at your disposal, StampPDF Batch is an essential part of any mission-critical, on-demand environment.

This online demo will allow you to test StampPDF Batch in a feature-limited environment, allowing a single PDF document at a time, and no limit to the number of stamps that can be made. When you are ready, and your stamps have been set up, press the “Stamp My Document” button, wait for the page to refresh, and then download your file.

If you have any questions about the online demo or StampPDF Batch, please feel free to call us at 610-284-4006, or contact us by email at support@appligent.com.

Best regards

From all of us at Appligent
